

UNITED STATES / PRIVATE SECTOR

Connected-facility risk, vendor access and operational evidence under one accountable structure.

A defined review for property owners, facility teams, regional general contractors and operationally sensitive environments. LSSCO leads the management layer; qualified US providers perform specialist technical work where separately authorized.

01

One site

A building, project or operating environment with defined ownership.

02

One record

Assets, vendors, access, incidents, recovery and actions.

03

One decision pack

Priority gaps, responsible parties and the 90-day route.

No US office, managed security service, penetration-test delivery, US small-business status or government endorsement is implied by this brief.

FIRST ENGAGEMENT

A defined review before broader delivery.

The client receives an operating map and prioritized decisions whether or not LSSCO continues into remediation control.

1. OPENING WORKSHOP

Owner, facility lead, IT provider, relevant contractors and vendors.

2. SYSTEM AND VENDOR REGISTER

Connected assets, business owners, support routes and evidence sources.

3. ACCESS REVIEW

Remote access, shared accounts, administrators, onboarding and offboarding.

4. SAFE TABLETOP EXERCISE

Authority, technical validation, containment, communication and restoration.

5. EXECUTIVE FINDINGS

Priority gaps, decisions, technical referrals and responsible parties.

6. 90-DAY ACTION ROUTE

30-, 60- and 90-day corrective actions tracked through SiteWorks.

DELIVERY STRUCTURE

LSSCO: operational lead and executive reporting. Uriyel SiteWorks: evidence and action record. Qualified provider: technical testing, monitoring or engineering within separate scope. Client: authority, access, risk decisions and acceptance.
